FRACKING & DRINKING WATER: ARE WE SAFE?

In 2014 over 230 Class-II injection wells in Eastern Ohio received over one billion gallons of highly toxic fracking material, including radioactive waste? Are these wells properly maintained and isolated from drinking water?

All are invited.

Moderator:
David Zeng, Chair, CWRU
Department of Civil Engineering

Panelists:
Vanessa Pesec, Past President,
Network for Oil and Gas
Accountability and Protection, and
Donald Palmer, Interim Dean
Honors College and Professor of
Geology, Kent State University
